American National Standards Institute (ANSI)

As the voice of the U.S. standards and conformity assessment system, the American National Standards Institute (ANSI) empowers its members and constituents to strengthen the U.S. marketplace position in the global economy while helping to assure the safety and health of consumers and the protection of the environment.

The Institute oversees the creation, promulgation and use of thousands of norms and guidelines that directly impact businesses in nearly every sector: from acoustical devices to construction equipment, from dairy and livestock production to energy distribution, and many more. ANSI is also actively engaged in accrediting programs that assess conformance to standards – including globally-recognized cross-sector programs such as the ISO 9000 (quality) and ISO 14000 (environmental) management systems.

ANSI's mission is to enhance both the global competitiveness of U.S. business and the U.S. quality of life by promoting and facilitating voluntary consensus standards and conformity assessment systems, and safeguarding their integrity.

ASTM International

Organized in 1898, ASTM International is one of the largest voluntary standards development organizations in the world. ASTM International, originally known as the American Society for Testing and Materials (ASTM), is a not-for-profit private organization that provides a forum for the development and publication of voluntary consensus standards for materials, products, systems, and services.

Today, more than 30,000 volunteer members develop documents that serve as a basis for manufacturing, procurement, and regulatory activities. These members come together under the ASTM umbrella from over 125 countries, mirroring the international marketplaces they serve. Representing industry, consumers, governments, and academia, ASTM's global membership is comprised of the world's top scientists, engineers, and business leaders. ASTM member's efforts result in high-quality, market-relevant standards that truly connect to the global marketplace and solve real problems in real time.

Membership in ASTM International is open at various levels for professionals, corporations, and organizations. ASTM also established a student membership category in 2003 and now has over 2500 student members. In addition, ASTM provides professors and instructors with valuable tools, resources and information to help make standards a key component of their teaching curriculum.
